

Botanical names in the genus *Narcissus*

NOTES

Status of botanical names

- All botanical names in this list are in *italic* (eg *aequilimba*)
- Botanical names with a dagger (†) have been established to be contrary to the provisions of the *International Code of Botanical Nomenclature - 2006* and thus invalid
- All other botanical names meet the provisions of the *International Code of Botanical Nomenclature - 2006*
- Botanical names in **bold** are accepted names (eg ***abscissus***). That is to say that in this Register they are considered to be the correct name for a taxon at species or infraspecific rank. The accepted names listed in alphabetical sequence below are laid out in classified order in the botanical classification
- An unresolved name (eg *gallaecicus*) is one that needs further investigation to determine its status, as the required information is not available in the place of publication

NB Botanical names are not validated merely by their appearance in the International Daffodil Register

Double quotes

- Double quotes indicate uncertainty about the identity of the taxon concerned (eg “*N. obvallaris*” in the parentage of *N. x lopezii*)

Classification

- The accepted names in this list are laid out in the botanical classification. In the horticultural classification, they are assigned to Division 13
