Match Point

RHS Hampton Court Palace Garden Festival 2024 - Show Garden

Our Story

We are a young innovative design team that likes to create imaginative spaces which inspire people. We aim to build a happier and greener environment.

Bond Landscape Design Limited was established in 2016 by Oliver Bond, who, as the firm's principal designer, has a Master's degree in Landscape Architecture, a BSc in Landscape & Garden Design and is a registered member of the Society of Garden Designers (of which, at the time of joining, he was the youngest member). Before qualifying and setting up his company, Oliver worked as a landscaper, learning fundamental building and soft landscaping skills.

Our journey so far has primarily focused on private residential gardens of all sizes and in a range of contexts: cities to hamlets, coastal to rural. We take pride in the projects we create and are passionate about making changes for the better.

We have been featured in BBC2's series, *Your Garden Made Perfect*, and have had articles in several publications (for example, *Homes and Gardens* and *Pro Landscaper*) which elevated our visibility and allowed us to showcase our works and make positive waves in the landscape industry.

The next step in our journey is to bring our imaginative spaces to the most famous flower shows in the world. That's where you come in.

Match Point

We have designed a low-impact lawn tennis court and clubhouse that is beneficial for flora, fauna and humans. We believe that our domestic sports facilities should not exploit the landscape, but should harmonise with it.

Sports facilities such as tennis courts and football pitches are often perceived as being functional, unattractive and artificial. It is challenging for these to provide strong green links and their associated benefits. However, to illustrate how a beautiful, low-impact sports facility can be integrated into an ecologically rich landscape, we have created a show garden that provides an affordable and aesthetically pleasing domestic tennis court and clubhouse without expense to the landscape's flora and fauna.

Match Point

We have created a show garden that demonstrates how a low-impact tennis court can be integrated into an ecologically rich landscape to provide affordable access to domestic health facilities without compromising the landscape's flora and fauna. The focal point of the garden is a stunning minimalistic clubhouse which requires minimal maintenance.

The rich purple and pure white colour scheme that represents the iconic colours of Wimbledon is set against the dark charcoal composite wall for maximum impact. The neutral colour of the DesignBoard allows the clubhouse to seemingly disappear within the planting.

This sponsorship opportunity will be beneficial to you as it will allow you to showcase your products and raise your profile at this prestigious show, giving you exposure to potential customers including high-net worth individuals.

The key features of the garden include:

- High-quality minimalistic clubhouse with built-in shelving and benches; constructed using composite cladding.
- Decorative tennis court utilising soft landscaping to form the tennis court (low growing thyme (court lines) and birch trees (net posts)).
- Standalone water feature to enhance the connection to the landscape and increase serenity/biophilic integration.
- Ornamental naturalistic effect planting utilising grasses, alliums (whites) and foxgloves (purples).
- Low-impact construction methods.
- Sense of serenity through a mature and rich planting scheme comprising an array of trees and plants.
- Low-impact, low-maintenance materials, the benefits of which include strength and durability.
- High-quality lounging furniture set with housewares.
- Storage facilities for tennis equipment.
- 14 semi mature *Betula utilis* subsp. *jacquemontii*.
- Approximately 730 plants.
